

# NH-100

## ONE-WAY WIRELESS REMOTE CONTROL REBOOTING DEVICE

For customers with distant, or difficult to access, or largely automated electrical devices which need to be controlled remotely (to avoid expensive truck rolls), the Nighthawk NH-100 allows customers to remotely turn such devices on or off by issuing paging commands with just a telephone call, even from a cell-phone.

Nighthawk's NH-100 can switch a single electrical device for up to 15 amps of 120 volt household or commercial wall socket electrical power, as instructed by your paging commands.

### FEATURES

- Wirelessly controlled – no phone line required.
- “Out-of-band” remote control by use of paging.
- Controls a single 15 amp 120 volt grounded outlet.
- Plugs into common 15 amp household outlet.
- Available in a broad range of POCSAG paging frequencies.
- Embedded paging antenna built-in, or use connector for optional external antenna.
- Devices can be turned on or off for periods of time, as defined in your paging command.
- Many Nighthawk units can share a common paging account and paging phone number.
- You can use your paging service or we can bundle a paging service with the product.

### APPLICATIONS

- Used for rebooting: WISP network towers; information kiosks; digital signage; remote cameras; WiFi hotspots; co-location equipment, all in distant locations across the country.
- Used to control household or office devices from a distance, even airplane pre-heaters.

## ABOUT THE COMPANY

For almost two decades, Nighthawk has been designing and manufacturing easy to use “Plug and Play” wireless switches to remotely control virtually any electrical device, from any location. Our products set the standard for excellence in those areas that matter most to our customers, including technology, ease of use and installation.
