

# CEO950

## **TWO WAY WHOLE HOUSE ELECTRIC CONNECT / DISCONNECT DEVICE**

The CEO950 is an integrated, wireless two-way whole house remote electric connect/disconnect solution. Built upon a new host platform, the CEO950 comes with a range of new features including Outage Notification and Service Interruption.

Like its one-way CEO700 predecessor, the CEO950 uses a public radio network and does not require any infrastructure build out. It can be deployed only where needed.

The two-way radio communication is completed using Cellular GSM radio technology. When a disconnect or reconnect message is sent, a response is sent back and received via Nighthawk's Utility WebConnect™ software confirming not only that the command was received, but that it was completed based on the then current state of the relay.

The CEO950 installs in just minutes and works with any standard 2S meter. Power is disconnected load side, so any AMR device used at the meter will remain operational and electronic meters can always be read. The CEO950 is operated through Nighthawk's Utility WebConnect software.

Nighthawk's applications are MultiSpeak® compliant. The MultiSpeak® Initiative is a collaboration of the National Rural Electric Cooperative Association (NRECA), leading software vendors supplying the utility market, and utilities. The Initiative has developed and continues to expand a specification that defines standardized interfaces among software applications commonly used by electric utilities.

Adding Nighthawk's Multispeak-compliant collar to existing one-way AMR systems, such as the Turtle 1, enhances the value and service life of such systems by enabling enforceable prepay and remote disconnect with two-way confirmation.

### ABOUT THE COMPANY

For over a decade, Nighthawk has been designing and manufacturing easy to use, "Plug and Play" wireless telemetry to remotely control virtually any electrical device, from any location. Our products set the standard for excellence in the areas that matter to our customers, including technology, ease of use and installation.

### FEATURES

- Plug & Play Installation
- 2 Way Remote Connect/Disconnect
- Outage Notification
- Public Network requires no infrastructure build out.
- MultiSpeak Compliant

### BENEFITS

- Save money on expensive truck rolls
- Keep utility personnel out of harms way
- Lower risk and liability for accidents
- 2 Way verification eliminates connection questions
