

# NH-800

## ONE-WAY WIRELESS REMOTE CONTROL REBOOTING DEVICE

For customers with distant, or difficult to access, or largely automated electrical devices which need to be controlled remotely (to avoid expensive truck rolls), the Nighthawk NH-800 allows customers to remotely turn such devices on or off by issuing paging commands via either a Web-site “pick and click” or a telephone call.

Nighthawk’s NH-800 can switch, by individual device, or as a group, up to eight independent relays, totaling 15 amps of 120 volt household or commercial wall socket electrical power as instructed by your paging commands.

### FEATURES

- Wireless controlled – no phone line required.
- “Out-of-band” remote control by use of paging.
- Uses regular 120 volt grounded outlets.
- Plugs into common 15 amp household or business office wall socket.
- Devices can be turned on or off for periods of time defined in your paging command.
- Many NH-800 units can share one common paging account and paging phone number.
- Available in a broad range of POCSAG paging frequencies.
- You can use your paging service or we can bundle a paging service with the product.
- Optional Web-site based “pick and click” access to all of your Nighthawk devices.

### APPLICATIONS

- Red-light cameras or highway signage in remote field enclosures across the country.
- Computer or security equipment at homes, offices, up towers, or in distant locations.

## ABOUT THE COMPANY

For two decades, Nighthawk has been designing and manufacturing easy to use “Plug and Play” wireless telemetry to remotely control virtually any electrical device, from any location. Our products set the standard for excellence in those areas that matter to our customers, including technology, ease of use and installation.
